

A-Read the following test, then choose the correct answer A, B, C or D: (60 marks)

One of the most destructive moments in our lives is failure. When we work hard and keep faith with clear heart and soul to accomplish something and fail, it will surely have negative consequences for our lives. When we fail, life turns upside down. Everything seems to disappear into thin air. However, most people don't realize that failure acts as a stepping-stone towards success. They don't know that we can learn more about our lives when we fail. Throughout history, there have been many famous people who had once greatest failures in their lives, but later they could learn from their experience and were able to reach the top. Thomas Edison is by far one of the most famous inventors in history. He holds 1,093 patents to his name. However, when attempting to invent a commercially-viable electric light bulb, he failed over 10,000 times. When asked by a reporter how it felt to fail so many times, he merely stated, "I have not failed 10,000 times. I have not failed once. I have succeeded in proving that those 10,000 ways will not work. When I have eliminated the ways that will not work, I will find the way that will work." Albert Einstein, one of the greatest thinkers of our time, didn't speak until he was four-years old. He also failed his entrance exam to the Swiss Federal Polytechnic School located in Zurich at sixteen-years old. And, even his father, up until the time of his death, considered his son to be a major failure. After eventually graduating from college, Einstein actually worked as an insurance salesman, but quit after sometime because he failed at that as well. Bill Gates has amassed a mind-boggling net worth of close to \$80 billion, and is known as the infamous father of modern personal-computing software. He brought us operating systems such as Microsoft DOS and Windows, along with wildly-popular titles such as Microsoft Office's Word, Excel and PowerPoint. However, at the age of seventeen-years old, his first software company called, Traf-O-Data, which analyzed raw traffic logs, failed. Walt Disney is the creative genius who brought us the likes of Mickey Mouse, Donald Duck and Snow White. He created the Walt Disney Company after his own name sake. Yet, he faced many failures. His first company, Laugh-O-Gram went bankrupt. It wasn't until 5 years later and plenty of heartache - after he created Mickey Mouse - did he begin to experience a small amount of success and fame.

B-Read the following test, then choose the correct answer A, B, C or D: (60 marks)

Artificial Intelligence (AI) is the branch of science and engineering specialized in making clever machines, capable of thinking and imitating human-level intelligence. One of the primary targets of AI field is to produce fully intelligent agents that interact with the surroundings and conduct human-like behaviors. These agents are tools, having the ability to judge matter and differentiate what is wrong. The field has started with robots, which can sense and react to the world around them. They also cover purely software-based agents, which can be actuated with natural language and multimedia. Currently, the field expands to driving, aviation, medicine, online advertising, image recognition, and personal assistance. The AI field is based on computer science, information engineering, mathematics, psychology, linguistics, philosophy and many other fields. The first spark started in the year 1950, when a test of the ability of a machine to exhibit intelligent behavior equivalent to that of a human was done. Since then, the term AI has been introduced and closely associated with the field of artificial intelligence which was popular until the end of the 1980s. In the 1990s, the new concept of "intelligent agent" emerged when AI was not only limited to computer science, but developed to include other areas like health, security, education, music, art, and business applications. Many AI applications are deeply embedded in the infrastructure of every industry, and they are expected, in a few years, to touch nearly all the industries. However, AI technologies are still limited to very specific applications. One of the AI limitations is the lack of "common sense"- the power to judge information beyond its acquired knowledge. AI is also limited in terms of emotional intelligence.
